## Less is more...

Though these words first appeared in an 1855 Robert Browning poem, the phrase has come to be synonymous with one of the 20th century masters of the modern architectural movement —Mies van der Rohe. Today, they are the words that inspire ILINE.

For almost one hundred years, Interstate + Lakeland Lumber has been manufacturing and distributing wood mouldings for interior and exterior applications. Throughout this period, we have developed special relationships with the finest architects, designers, and builders in the tri-state area. While our current moulding and millwork catalogue continues to be a successful and valuable resource for the architectural community, we have been continually asked and challenged to create the next great unique moulding program. As styles and tastes evolve, it is important for the architectural mouldings utilized in the construction of residential dwellings to evolve, as well.

With that in mind, we are proud to introduce ILINE, a collection of new and vibrant moulding profiles that reflects the values and sensibilities of today's homebuyer. After countless hours collaborating with a network of top design professionals, we have created thoughtful and systematic groupings of bases, casings, crowns, coves and pattern stock that when combined create the finest architectural details imaginable in residential construction.

The ILINE collection is the next great step in the evolution of Interstate + Lakeland Lumber, the leader in moulding profiles stocking programs. I truly hope that you will enjoy using and designing with the ILINE series of mouldings as much we have enjoyed creating it for you.

We look forward to serving you,

Sheldon Kahan  
+ IL Millwork Staff

# 1 — Overview

## The Next Great Step

The ILINE Collection is a comprehensive moulding program that offers a fresh pallet of new and vibrant profiles that will be an enhancement to any interior space. These profiles are divided into categories based upon their specific application.

To ensure that the proper mouldings are specified in the project, simply write the corresponding ILINE moulding number in your specifications, or architectural plans.

### In-Stock and Ready for Prompt Delivery

Our 100,000-square-foot millwork distribution center, located in Bethel, CT, stocks all of the ILINE Collection moulding profiles shown in this book. All of the ILINE profiles are produced from a solid poplar substrate with a machine applied water based low VOC primer. This process allows for greater stability of the ILINE product and less interior acclimation time prior to installation.

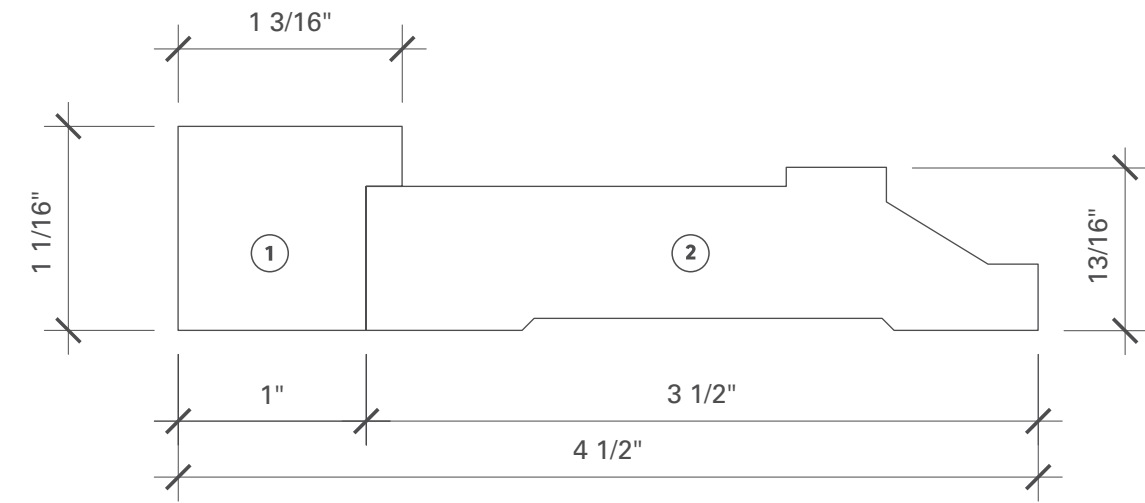

### Custom Runs and Profiles

Although ILINE is stocked in primed poplar only, we have the ability to match all of the profiles in any hardwood for those rooms that require a stained finish. In addition, we are capable of manufacturing all of the ILINE profiles for curved or radius applications. If you are unable to select a profile that fits your design criteria, feel free to design what you envision and we will be

more than happy to manufacture it for you. We have the capacity to match an existing profile that you have or simply saw somewhere else. With over a combined 100 years in the moulding business, the ILINE staff looks forward to assisting you to ensure that your interior moulding details exceed your vision.
